TO WHOM IT MAY CONCERN

Re: Rodenthor Food Monitor Blocks with Fluo-NP Technology

I, Mr Steve Broadbent, Regional Director for Ensystem do hereby certify that the above names product contains a range of natural proteins together with natural and synthetic attractants to ensure high palatability to rats and mice. These ingredients include wheat and soy.

There are NO peanuts, nor any other nut products used in the production of any of the products. Moreover, peanuts are not used in any products in the production facility.

Baits should be used in bait stations when used in food packaging, processing, or storage facilities. The use of bait stations will greatly reduce the possibility that the potential allergens, wheat, and soy, may come into contact with food.

These Ensystem baits do not contain any of the following items that are typically considered allergens:

- Peanuts
- Nuts (almonds, hazelnuts, pistachio, walnuts)
- Milk (lactose, protein)
- Eggs
- Fish
- Shellfish, crustaceans (crabs, lobster, shrimps)
- Sesame seeds
- Celery
- Sulphites
- Peas
- Mustard
- Molluscs
- Lupins

Ensystem baits are manufactured in a clean manufacturing environment in Italy and HACCP Approved by HACCP Australia Pty Ltd.

Yours faithfully,

Steve Broadbent

Steve Broadbent

Regional Director - Australia, Asia, Africa and Middle East
